DETAILED ACTION

Election/Restrictions

1. Claim 1 is generic and allowable. Accordingly, the restriction requirement as to the encompassed species is hereby withdrawn and claims 2-5, directed to the species of Fig. 3K, no longer withdrawn from consideration since all of the claims to this species depend from or otherwise include each of the limitations of an allowed generic claim.

In view of the above noted withdrawal of the restriction requirement as to the linked species, applicant(s) are advised that if any claim(s) depending from or including all the limitations of the allowable generic linking claim(s) be presented in a continuation or divisional application, such claims may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Allowable Subject Matter

2. Claims 1-16 are allowable over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record fails to teach or render obvious a fuse box of an integrated circuit device having all exclusive limitations as recited in claims 1, 9, and 16, comprising a fuse line at a fuse portion, a first insulating layer on the fuse line, a first guard ring pattern enclosing the fuse line and on the first insulating layer, a second insulating layer on the first guard ring pattern and the first insulating layer, and a second guard ring pattern that encloses the fuse line on the second insulating layer, characterized in that a passivation layer, on the second insulating layer and the second guard ring pattern, defines a portion of a fuse opening having a sidewall in the first and second insulating layers and the passivation layer extends on the sidewall of the fuse opening to at least the first

insulating layer, or that the second insulating layer has an opening partially exposing the fuse portion and the first guard ring pattern.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Copies of the references are not being furnished with this Office Action per MPEP § 707.05(a).

U.S. Patent 6,121,073 to Huang et al., cited in the parent application, discloses a fuse structure for integrated circuit having a fuse portion comprising multiple-level metal patterns, which do not appear to form a ring, and a passivation layer, which together with the multiple-level metal patterns forms a fuse opening, over a fuse line, the passivation layer not extending on the sidewall of the fuse opening to at least a lower interlevel dielectric layer, and an upper interlevel dielectric layer not partially exposing the fuse portion and not partially exposing a lower metal pattern of the multiple-level metal patterns.
